Caitlin Crowe, Planner I

Date: January 24, 2024

RE: **VARIANCE CASE V24-007**
4561 Derby Lane – Allow encroachment into the 75-foot impervious surface area setback

BACKGROUND

The applicant is requesting a variance to allow encroachment into the City's 75-foot impervious surface area setback to rebuild an existing deck on the rear of the home. The City's stream buffers are controlled by Chapter 46, Article VI.

ANALYSIS

The subject parcel is a 0.34-acre lot located on the north side of Derby Lane (see Figure 1). A stream runs to the north of the property and continues through the adjacent properties to the east and west. The subject parcel and all adjoining parcels are zoned R-15 and are all occupied by single-family detached residences. The subject property is within the Churchill Downs subdivision, which was platted in 1985.

The applicant is proposing to rebuild a 392 square foot deck on the rear of the existing home. The existing house and deck was constructed in 1987, prior to the adoption of the stream buffer ordinance in 2005. Currently, the rear yard is greatly encumbered by the State's 25-foot undisturbed stream buffer, the City's 50-foot undisturbed stream buffer and the City's 75-foot impervious surface area setback. No other variances are needed as the property is well below their impervious coverage maximum of 35%.

Since the Stormwater Ordinance does not differentiate between replaced and new impervious area, a variance is required for the nonconforming stream buffer encroachment. Additionally, per Section 1102, "no nonconforming building, structure or use shall be extended, nor shall its total value be enhanced, unless such extensions or alterations conform with the provisions of this ordinance." Since the deck is being completely rebuilt, the property no longer remains legally nonconforming. However, since the existing single-family home and deck were already non-conforming, the hardship is not self-created.

Since the stream buffer encroachment occurred in 1987 and there is no addition of land disturbing activities or stormwater runoff, the City Engineer has determined that no remediation is required in order to support the variance.

The applicant will require relief from the City's stream buffer ordinance in order to rebuild the deck. Community Development believes the hardship is not self-created, as the lot of record has existed before the stream buffer ordinance was adopted. Community Development believes this is the minimum variance needed to allow for any outdoor amenity, and that there should be no negative impacts to adjacent properties if approved. At the time of this report, Community Development has not received any calls in opposition to the request.

STAFF COMMENTS

The applicant is requesting relief from the City's 75-foot impervious surface area setback to rebuild an existing deck. According to Section 1403 of the Zoning Ordinance, variances must be reviewed under the following standards: (1) Whether there are unique and special or extraordinary circumstances applying to the property; (2) Whether any alleged hardship is self-created by any person having an interest in the property; (3) Whether strict application of the relevant provisions of the code would deprive the applicant of reasonable use of the property; and (4) Whether the variance proposed is the minimum variance needed. After a review of the standards above, Community Development believes that the encroachment will not adversely affect surrounding residents; therefore, staff recommends **approval** of the requested variance with the following condition:

1. Approval of the requested variance is conditioned upon substantial compliance with the site plan submitted with the variance application.
