1.0 INTRODUCTION

The purpose of this study is to determine the traffic impact from the proposed Amana Academy Charter School that will be located at 2200 Lake Park Drive, Smyrna, in Cobb County, Georgia. The traffic analysis evaluates the current operations and future “No-Build” and “Build” conditions for Phase 1 (opening year 2025) and full build out year (2031) with the traffic generated by the proposed development.

Phase 1 consists of only the kindergarten through 5th grade classrooms opening with 314 students in 2025. Phase 2 will represent full build-out in 2031. At full build-out, the kindergarten through 8th grade classrooms will have a total of 618 students.

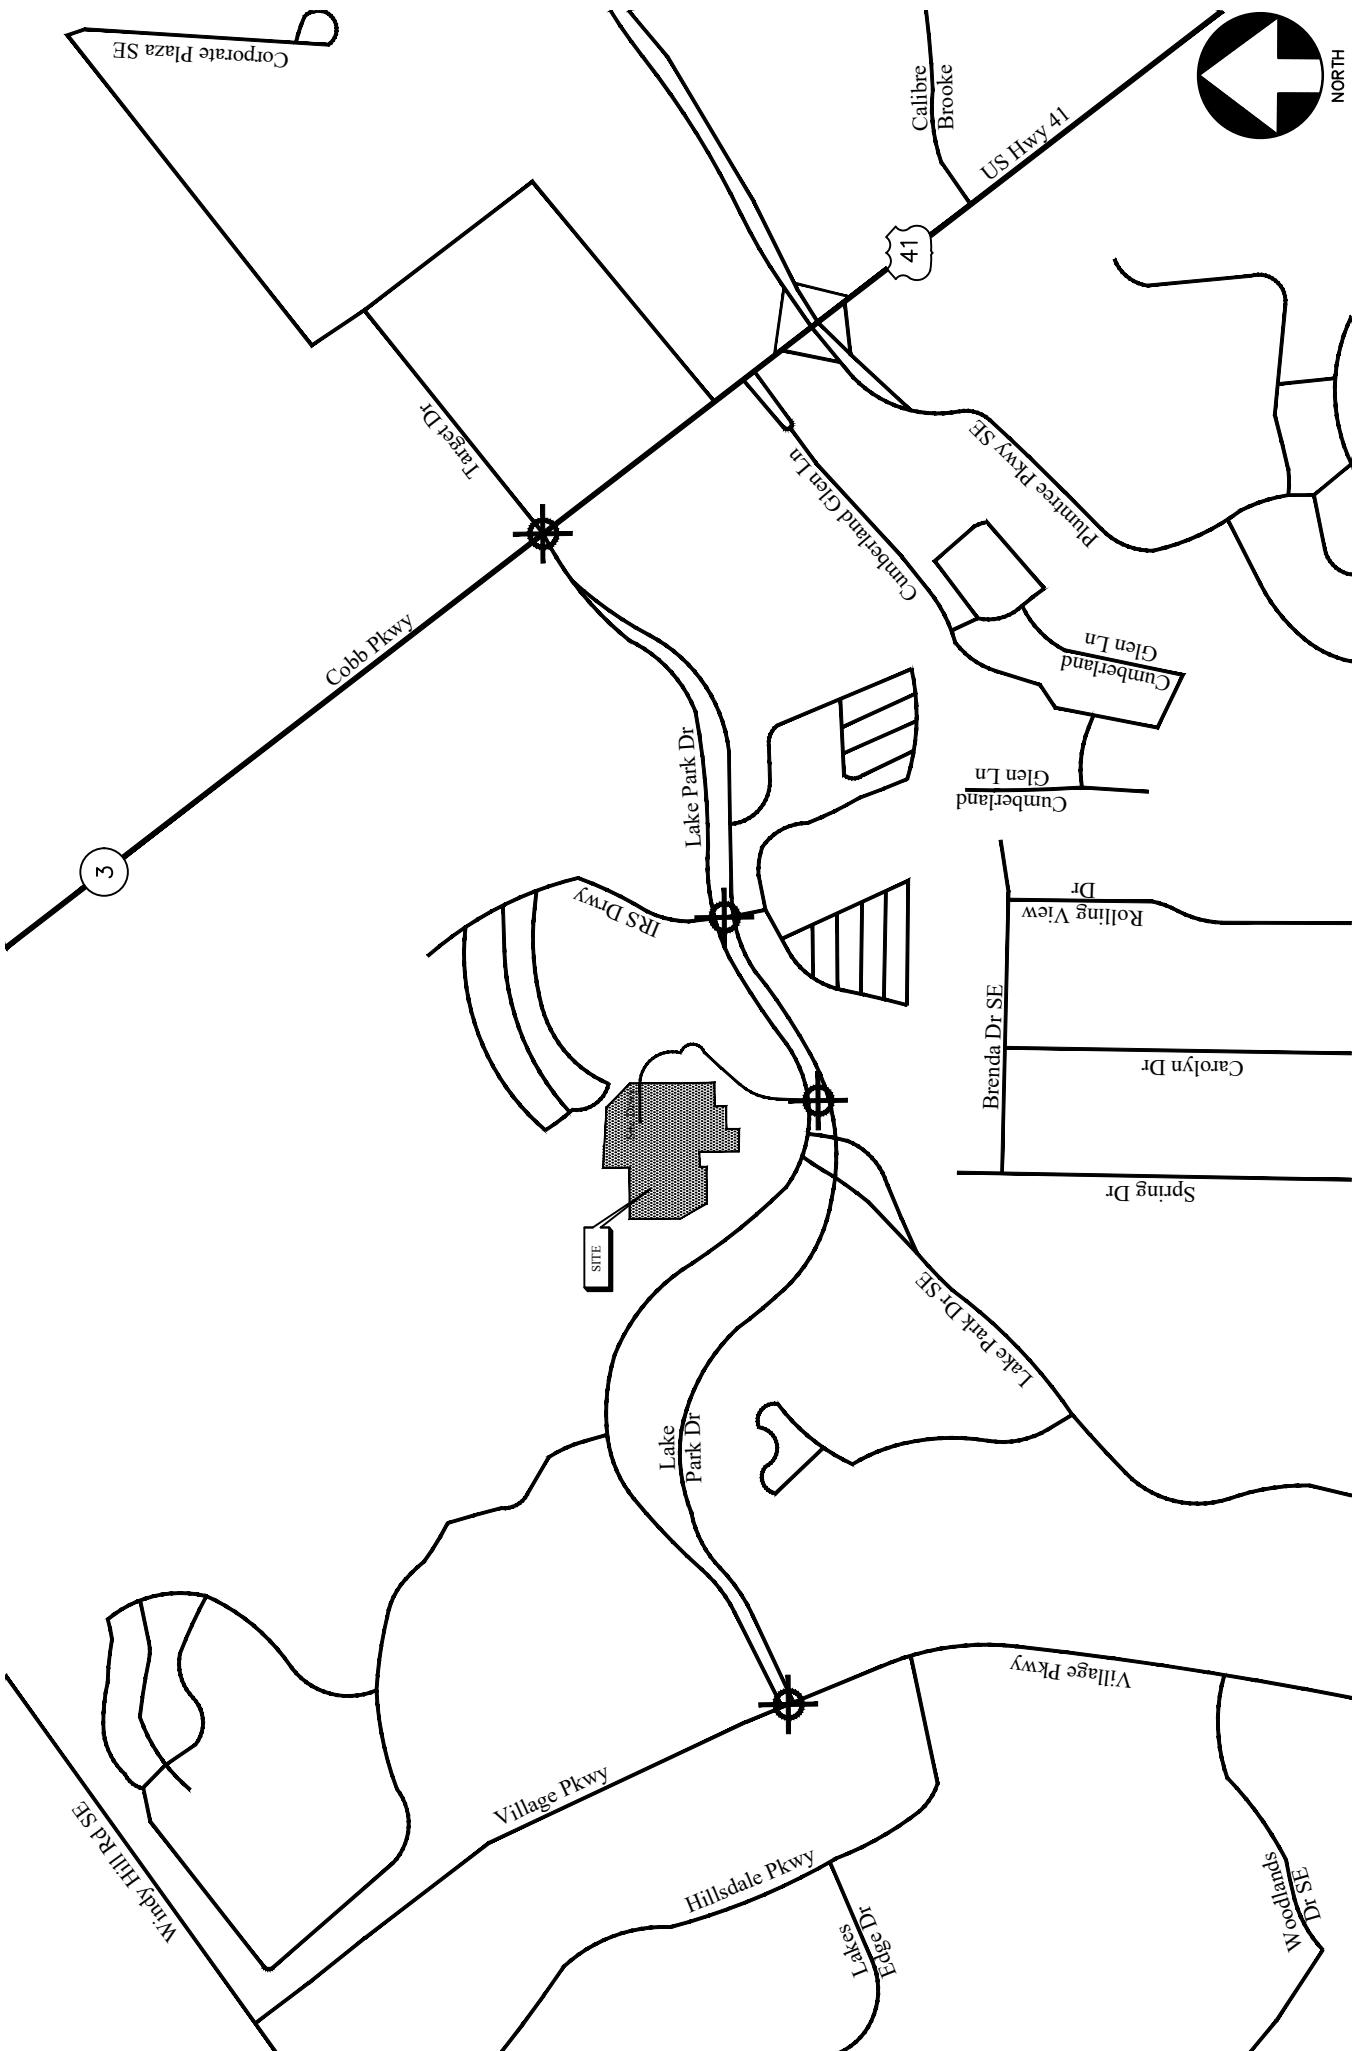

The development proposes using the existing full access driveway on Lake Park Drive. The existing building, consisting of 35,600 sf, is currently occupied by Murata Electronics Inc. and will be vacated by Murata Electronics. The school will add 3 modular buildings of 4,000 sf each.

The AM, PM and school dismissal peak hours have been analyzed in this study. In addition to the site access, this study includes the evaluation of traffic operations at the intersections of:

- Lake Park Drive at US 41/ SR 3 (Cobb Parkway)
- Lake Park Drive at Internal Revenue Service’s Driveway
- Lake Park Drive at 2200 Lake Park Drive Site Driveway (Murata Electronics Driveway)
- Lake Park Drive at Village Parkway

Recommendations to improve traffic operations have been identified as appropriate and are discussed in detail in the following sections of the report. The location of the development and the surrounding roadway network is shown in Figure 1.

2.0 EXISTING FACILITIES / CONDITIONS

2.1 Roadway Facilities

The following is a brief description of each of the roadway facilities located in proximity to the site:

2.1.1 US 41/ SR 3 (Cobb Parkway)

US 41/ SR 3 (Cobb Parkway) is a northwest-southeast, four-lane roadway with a two-way left-turn lane and posted with a speed limit of 45 mph in the vicinity of the site. Cobb County DOT traffic counts (Station ID 067-2143) indicate that the daily traffic volume on US 41/ SR 3 (Cobb Parkway) in 2022 was 35,800 vehicles per day southeast of Lake Park Drive. Cobb County DOT classifies US 41/ SR 3 (Cobb Parkway) as a Principal Urban Arterial roadway.

2.1.2 Lake Park Drive

Lake Park Drive is an east-west, two-lane, undivided roadway with a posted speed limit of 30 mph. Cobb County DOT classifies Lake Park Drive as a Local Street.

2.1.3 Village Parkway

Village Parkway is a north-south, four-lane, undivided roadway with a posted speed limit of 45 mph. Cobb County DOT classifies Village Parkway as a Local Street.

3.0 STUDY METHODOLOGY

In this study, the methodology used for evaluating traffic operations at each of the subject intersections is based on the criteria set forth in the Transportation Research Board's Highway Capacity Manual, 6th edition (HCM 6). Synchro software, which utilizes the HCM methodology, was used for the analysis. HCM 2000 was used to report the level of service at the entry only driveway because HCM 6th expects at least one stop-controlled approach at the intersection to report the results and the intersection of Pebblebrook Road at the entry only site driveway does not have any traffic control. The following is a description of the methodology employed for the analysis of unsignalized and signalized intersections.

3.1 Unsignalized Intersections

For unsignalized intersections controlled by a stop sign on minor streets, the level-of-service (LOS) for motor vehicles with controlled movements is determined by the computed control delay according to the thresholds stated in Table 1 below. LOS is determined for each minor street movement (or shared movement), as well as major street left turns. LOS is not defined for the intersection as a whole or for major street approaches. The LOS of any controlled movement which experiences a volume to capacity ratio greater than 1 is designated as "F" regardless of the control delay.

Control delay for unsignalized intersections includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Several factors affect the control delay for unsignalized intersections, such as the availability and distribution of gaps in the conflicting traffic stream, critical gaps, and follow-up time for a vehicle in the queue.

Level-of-service is assigned a letter designation from "A" through "F". Level-of-service "A" indicates excellent operations with little delay to motorists, while level-of-service "F" exists when there are insufficient gaps of acceptable size to allow vehicles on the side street to cross the main road without experiencing long delays.

TABLE 1 — LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS

Control Delay (sec/vehicle)	LOS by Volume-to-Capacity Ratio*	
	v/c ≤ 1.0	v/c > 1.0
≤ 10	A	F
> 10 and ≤ 15	B	F
> 15 and ≤ 25	C	F
> 25 and ≤ 35	D	F
> 35 and ≤ 50	E	F
> 50	F	F

*The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection.

Source: Highway Capacity Manual, 6th edition, Exhibit 20-2 *LOS Criteria: Motorized Vehicle Mode*

3.2 Signalized Intersections

According to HCM procedures, LOS can be calculated for the entire intersection, each intersection approach, and each lane group. HCM uses control delay alone to characterize LOS for the entire intersection or an approach. Control delay per vehicle is composed of initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Both control delay and volume-to-capacity ratio is used to characterize LOS for a lane group. A volume-to-capacity ratio greater than 1.0 for a lane group indicates failure from capacity perspective. Therefore, such a lane group is assigned LOS F regardless of the amount of control delay.

Table 2 below summarizes the LOS criteria from HCM for motorized vehicles at signalized intersection.

Control Delay (sec/vehicle) *	LOS for Lane Group by Volume-to-Capacity Ratio*	
	v/c ≤ 1.0	v/c > 1.0
≤ 10	A	F
> 10 and ≤ 20	B	F
> 20 and ≤ 35	C	F
> 35 and ≤ 55	D	F
> 55 and ≤ 80	E	F
> 80	F	F

*For approach-based and intersection wide assessments, LOS is defined solely by control delay

Source: Highway Capacity Manual, 6th edition, Exhibit 19-8 *LOS Criteria: Motorized Vehicle Mode*

LOS A is typically assigned when the volume-to-capacity (v/c) ratio is low and either progression is exceptionally favorable, or the cycle length is very short. LOS B is typically assigned when the v/c ratio is low and either progression is highly favorable, or the cycle length is short. However, more vehicles are stopped than with LOS A. LOS C is typically assigned when progression is favorable, or the cycle length is moderate. Individual *cycle failures* (one or more queued vehicles are not able to depart because of insufficient capacity during the cycle) may begin to appear at this level. Many vehicles still pass through the intersection without stopping, but the number of vehicles stopping is significant. LOS D is typically assigned when the v/c ratio is high and either progression is ineffective, or the cycle length is long. There are many vehicle-stops and individual cycle failures are noticeable. LOS E is typically assigned when the v/c ratio is high, progression is very poor, the cycle length is long, and individual cycle failures are frequent. LOS F is typically assigned when the v/c ratio is very high, progression is very poor, the cycle length is long, and most cycles fail to clear the queue.

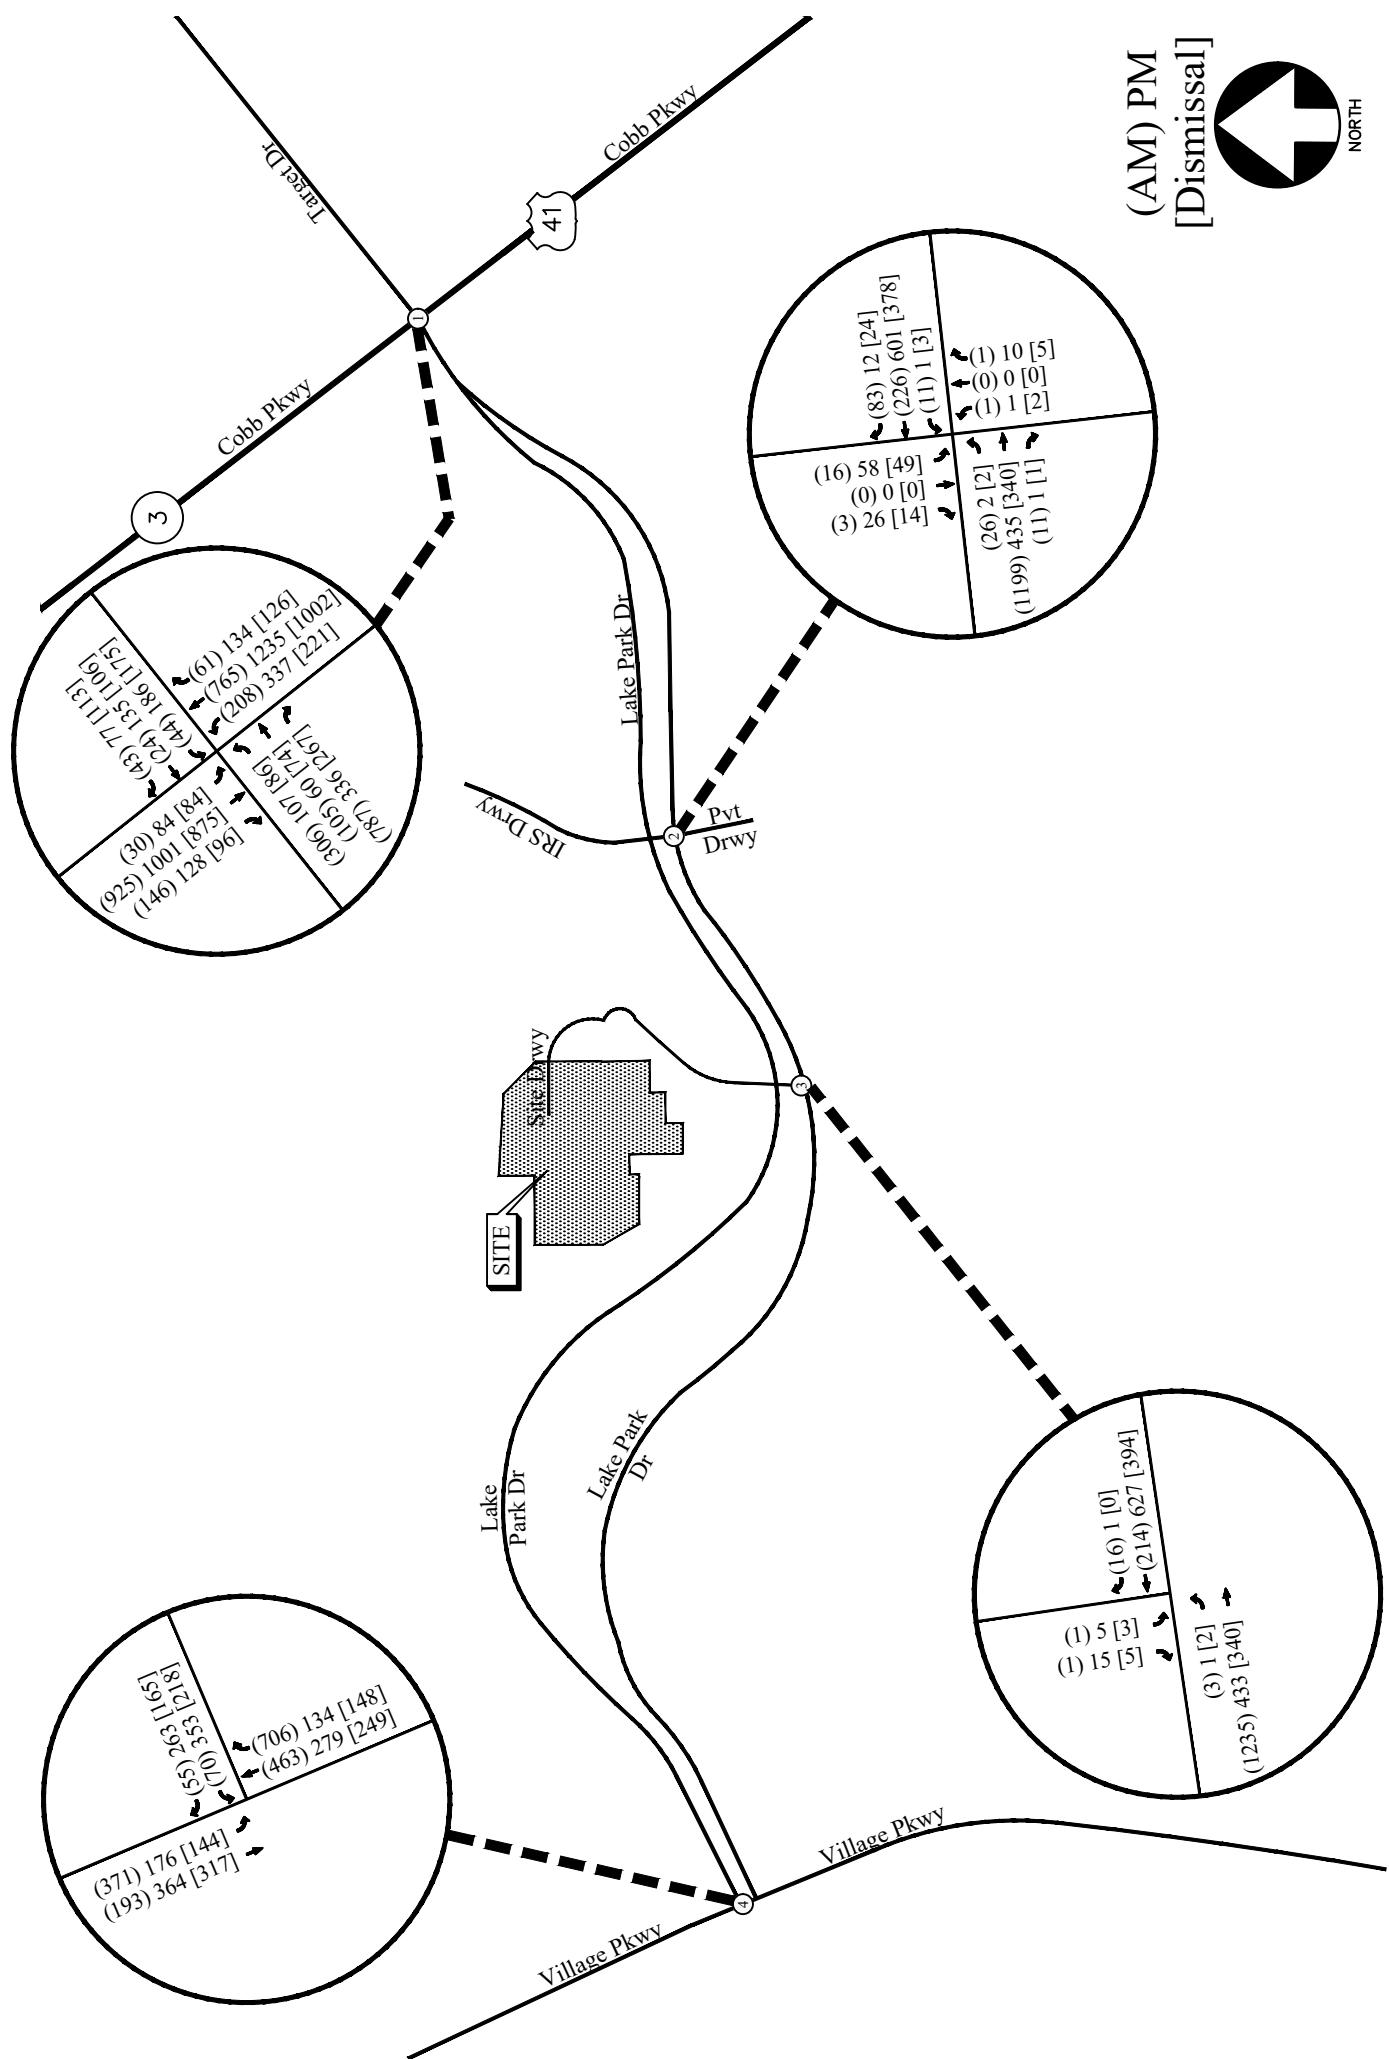

4.0 EXISTING 2023 TRAFFIC ANALYSIS

4.1 Existing 2023 Traffic Volumes

Existing traffic counts were obtained at the following study intersection:

- Lake Park Drive at US 41/ SR 3 (Cobb Parkway)
- Lake Park Drive at Internal Revenue Service's Driveway
- Lake Park Drive at 2200 Lake Park Drive Site Driveway (Murata Electronics Driveway)
- Lake Park Drive at Village Parkway

Turning movement counts were collected on Wednesday, November 15, 2023. All turning movement counts were recorded during the AM, PM and school dismissal peak hours between 7:00 AM to 9:00 AM, 2:00 PM to 6:00 PM respectively. The four consecutive 15-minute interval volumes that produced the highest volume at the intersections were then determined. These volumes make up the peak hour traffic volumes for the intersections counted and are shown in Figure 2. The existing traffic control and lane geometry for the intersections are shown in Figure 3.

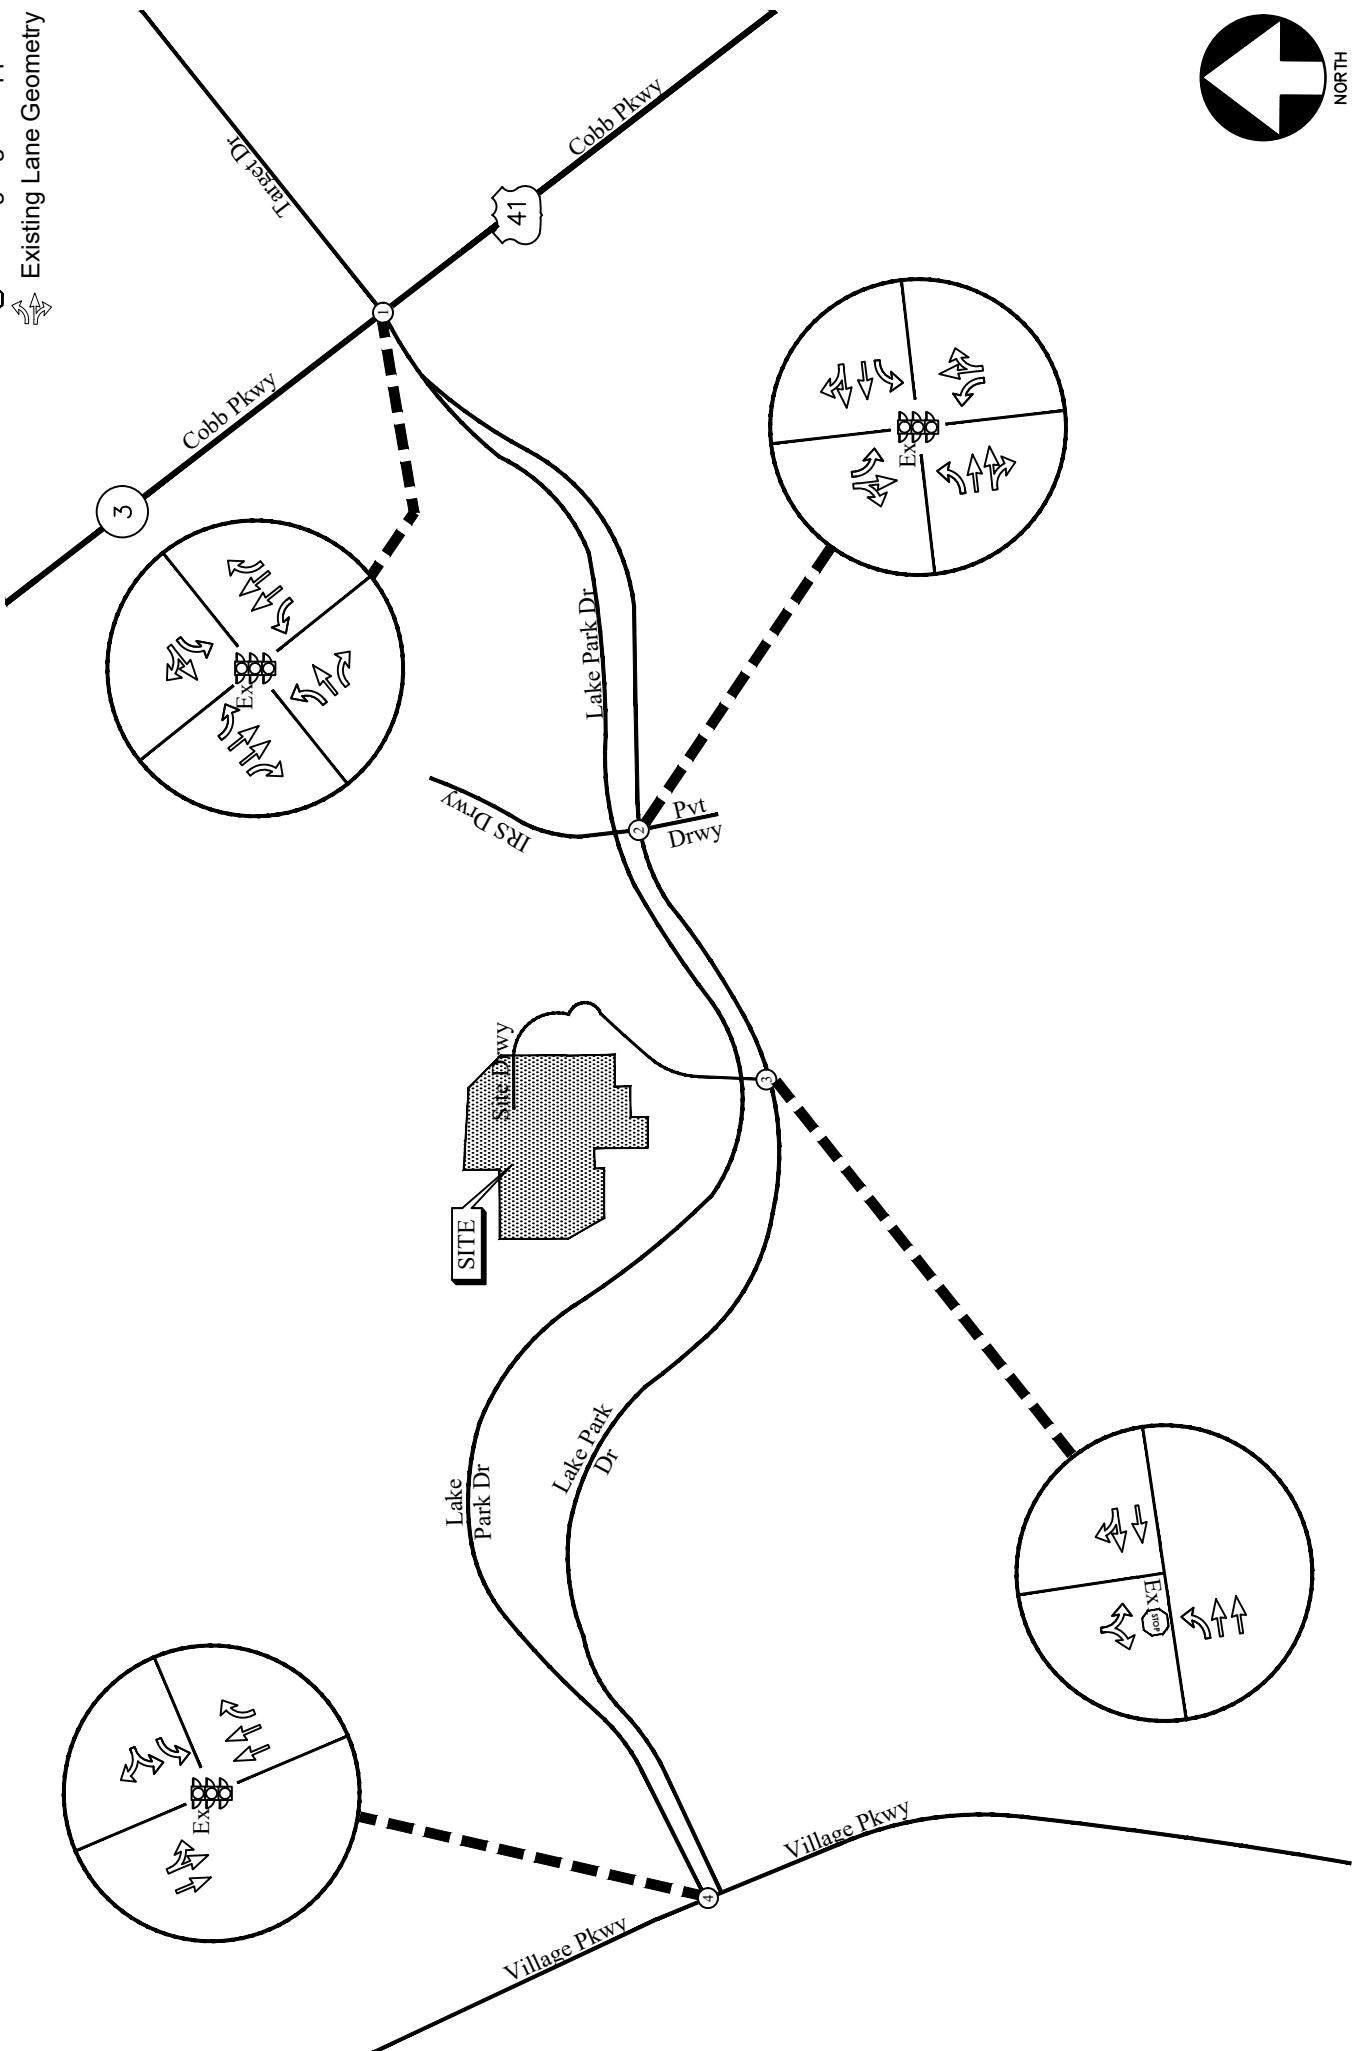

EXISTING WEEKDAY PEAK-HOUR VOLUMES

9

4.2 Existing 2023 Traffic Operations

Existing 2023 traffic operations were analyzed at the study intersections in accordance with the HCM methodology. The results of the analysis are shown in Table 3.

TABLE 3 – EXISTING INTERSECTION OPERATIONS

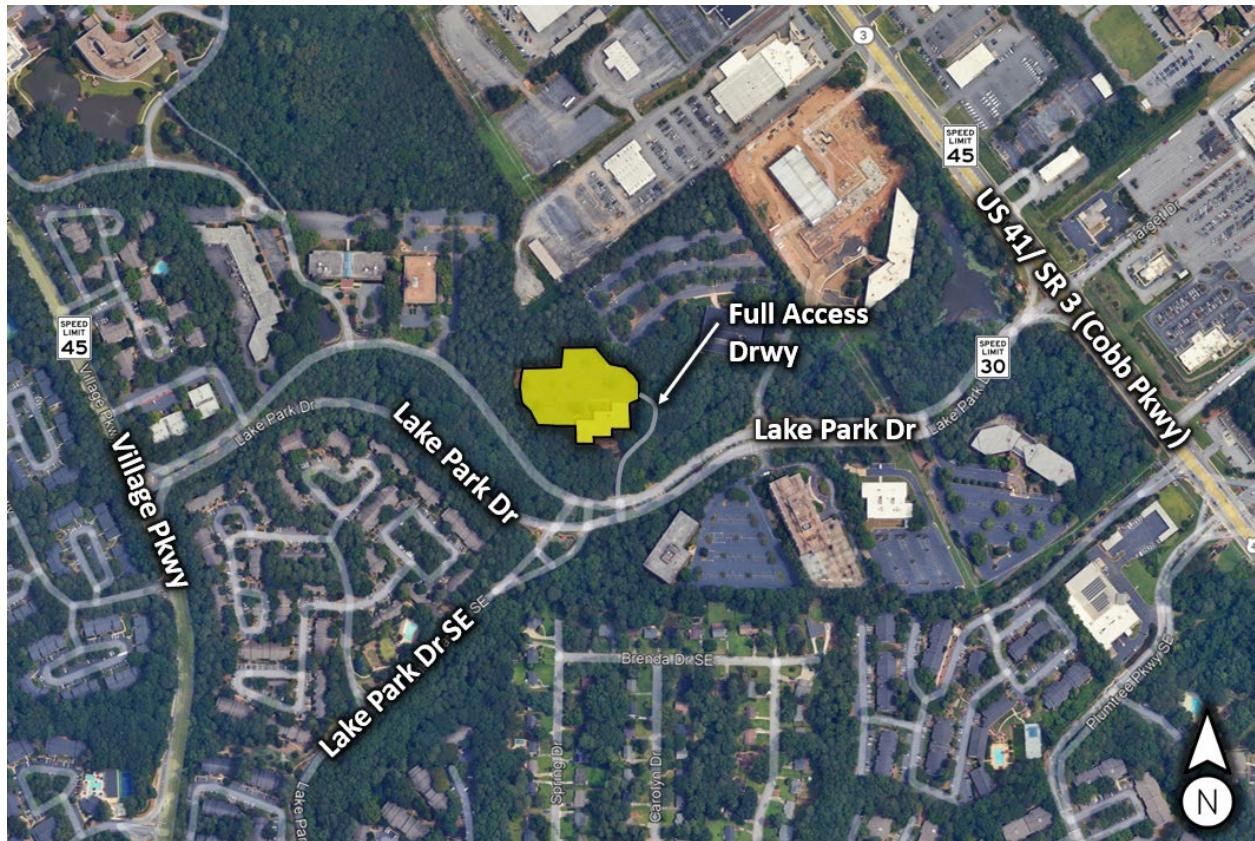

Intersection		Traffic Control	LOS (Delay)		
			AM Peak	PM Peak	Dismissal Peak
1	<u>US 41/ SR 3 (Cobb Parkway) @ Lake Park Dr/ Target Drwy</u> -Eastbound Approach -Westbound Approach -Northbound Approach -Southbound Approach	Signalized	C (25.4) E (55.0) E (58.7) B (15.1) B (19.8)	C (27.2) D (44.6) D (52.5) C (21.8) C (23.8)	C (23.3) D (46.1) D (53.1) C (15.7) C (18.0)
2	<u>Lake Park Dr @ Internal Revenue Service's Drwy/ Private Drwy</u> -Eastbound Approach -Westbound Approach -Northbound Approach -Southbound Approach	Signalized	A (6.0) A (5.4) A (4.9) D (57.1) E (58.4)	A (8.0) A (3.6) A (3.7) D (53.2) E (56.6)	A (8.0) A (3.3) A (3.4) D (54.5) E (57.6)
3	<u>Lake Park Dr @ Murata Electronics Drwy</u> -Eastbound Left -Southbound Approach	Stop Controlled on SB approach	A (7.8) B (14.2)	A (9.0) B (12.9)	A (8.2) B (11.1)
4	<u>Lake Park Dr @ Village Pkwy</u> -Westbound Approach -Northbound Approach -Southbound Approach	Signalized	A (6.6) E (69.7) A (1.5) A (3.8)	C (20.1) D (54.7) A (5.8) A (7.6)	B (15.7) E (59.5) A (3.4) A (4.3)

The results of existing traffic operations analysis indicate that all signalized study intersections are operating at a level of service “C” or better in all the AM, PM and School dismissal peak hours. The approaches at unsignalized study intersection of Lake Park Dr at Murata Electronics Driveway are operating at a level of service “B” or better in all the AM, PM and School dismissal peak hours.

5.0 PROPOSED DEVELOPMENT

The proposed Amana Academy Charter School will be located at 2200 Lake Park Drive, Smyrna, in Cobb County. The existing building consisting of 35,600 sf is currently occupied by Murata Electronics Inc. and will be vacated by Murata Electronics. The school proposes to open in two phases. Phase 1 consists of only the kindergarten through 5th grade classrooms opening with 314 students in 2025. Phase 2 will represent full build-out in 2031. At full build-out, the kindergarten through 8th grade classrooms will have a total of 618 students.

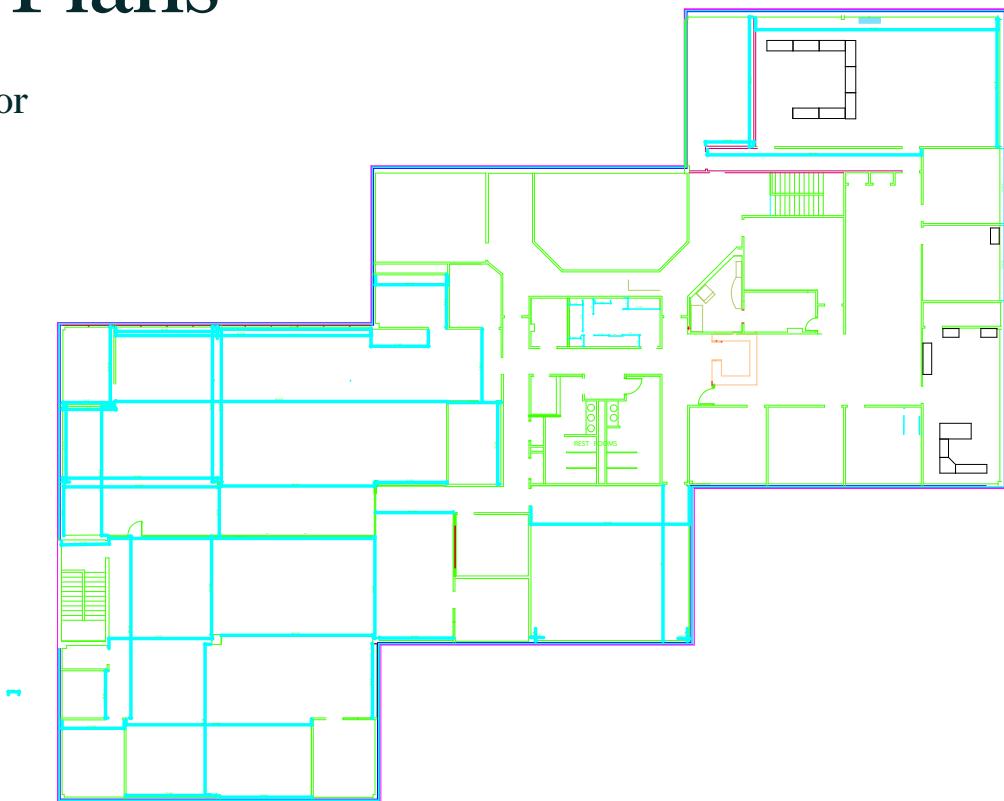

The development proposes using the existing full access driveway on Lake Park Drive.

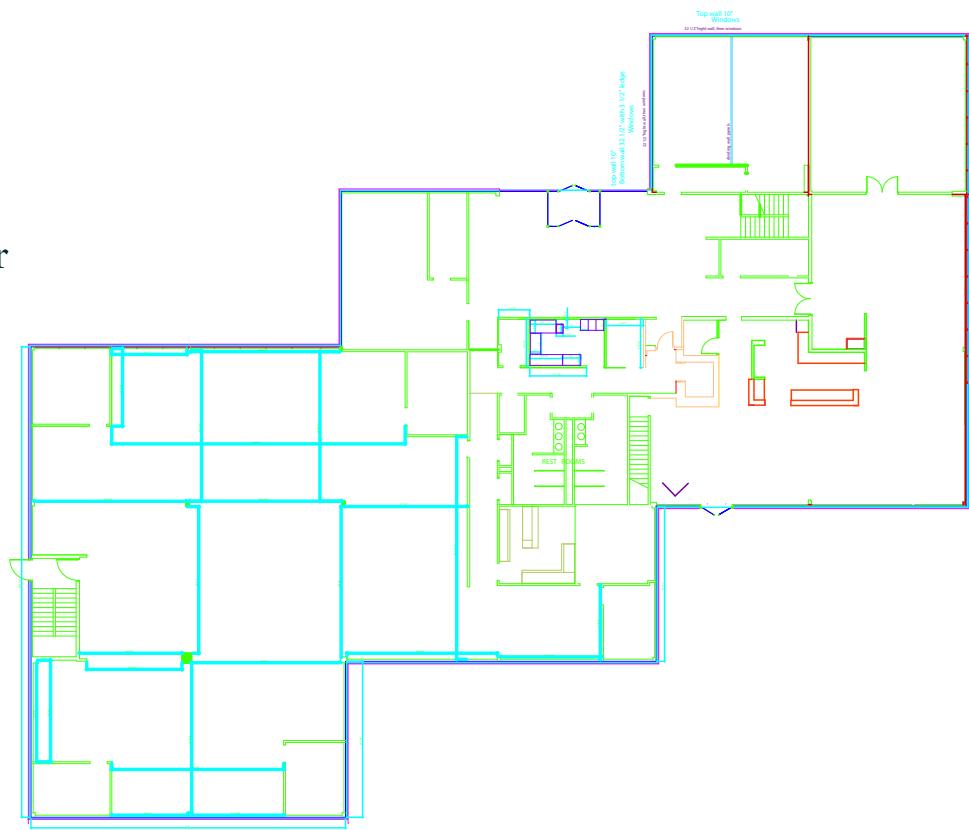

A site plan is shown in Figure 4.

Floor Plans

First Floor

Second Floor

5.1 Trip Generation

Trip generation estimates for the project were based on the rates and equations published in the 11th edition of the Institute of Transportation Engineers (ITE) Trip Generation report. This reference contains traffic volume count data collected at similar facilities nationwide. The trip generation was based on the following ITE Land Uses: 536 - *Charter Elementary School* and 530 – *Private School (K-8)*. The calculated trip generation for the proposed development for the opening year 2025 and full build-out year 2031 is shown below in Table 4.

TABLE 4 – TRIP GENERATION

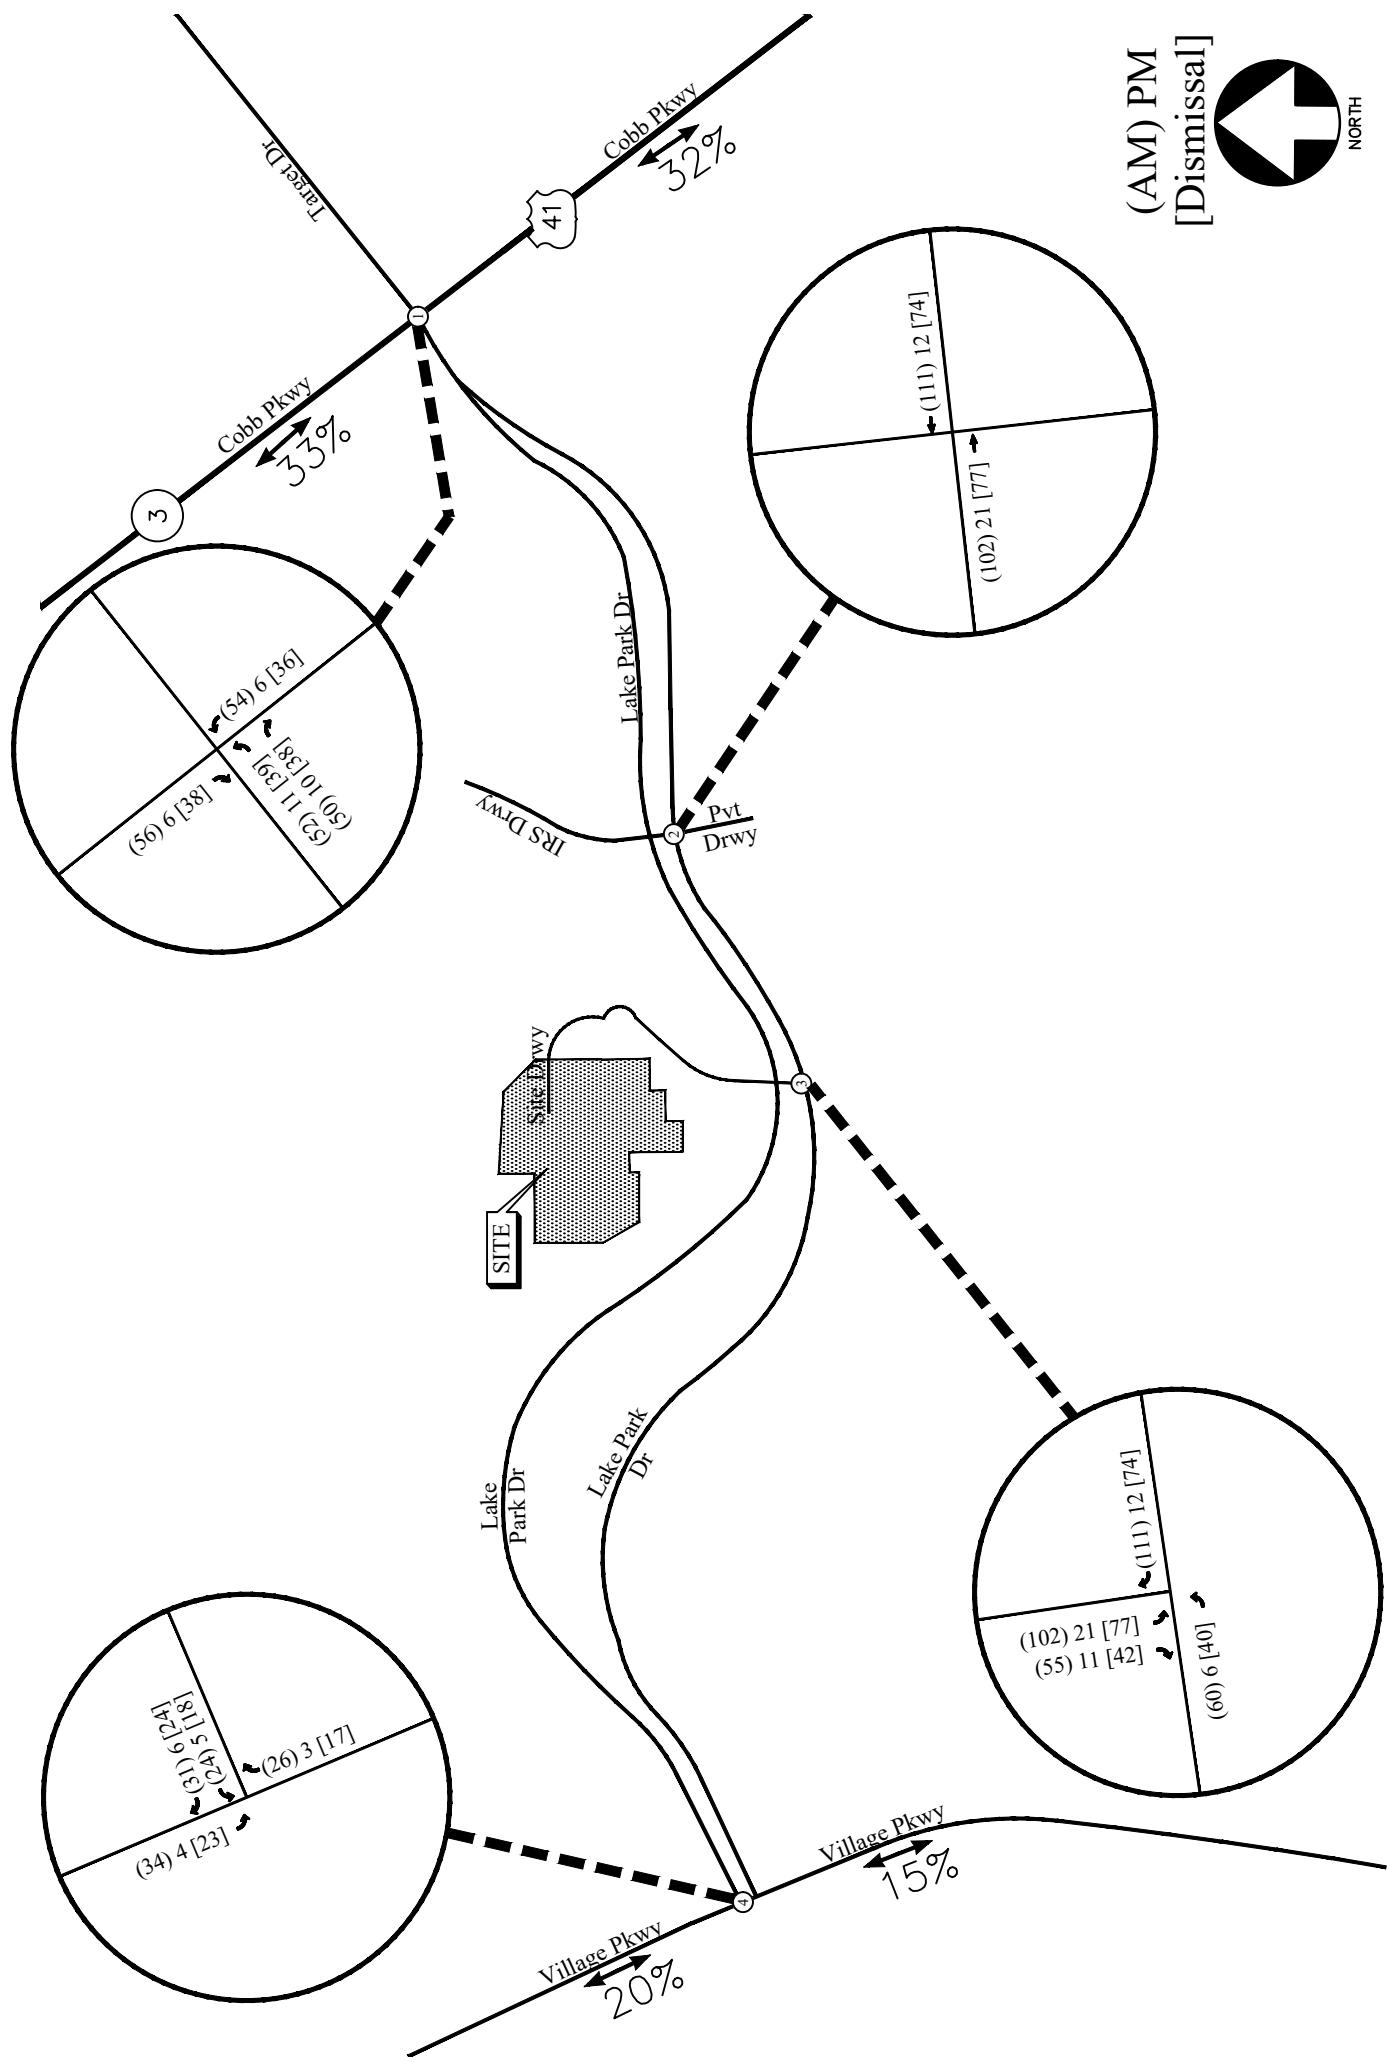

Year	Land Use	Number of Students	AM Peak Hour		PM Peak Hour		School Dismissal Peak Hour		24-Hr
			Enter	Exit	Enter	Exit	Enter	Exit	2-way
2025 (Opening Year)	Charter Elementary School	314	170	157	18	32	114	119	581
2031 (Full Build-out)	Private School (K-8)	618	361	284	74	87	175	197	2,540

5.2 Trip Distribution

The trip distribution describes how traffic arrives and departs from the site. An overall trip distribution was developed for the site based on a review of the existing travel patterns in the area and the locations of major roadways and highways that will serve the development and location of the school in the school district. The site-generated peak hour traffic volumes, shown in Table 4, were assigned to the study area intersections based on this distribution. The outer-leg distribution along with the AM, School Dismissal, and PM peak hour traffic generated by the development are shown in Figures 5 and 6 for the opening year 2025 and full build-out year 2031.

TRIP DISTRIBUTION AND SITE-GENERATED WEEKDAY PEAK HOUR VOLUMES (2025)

A&R Engineering Inc.
FIGURE 5

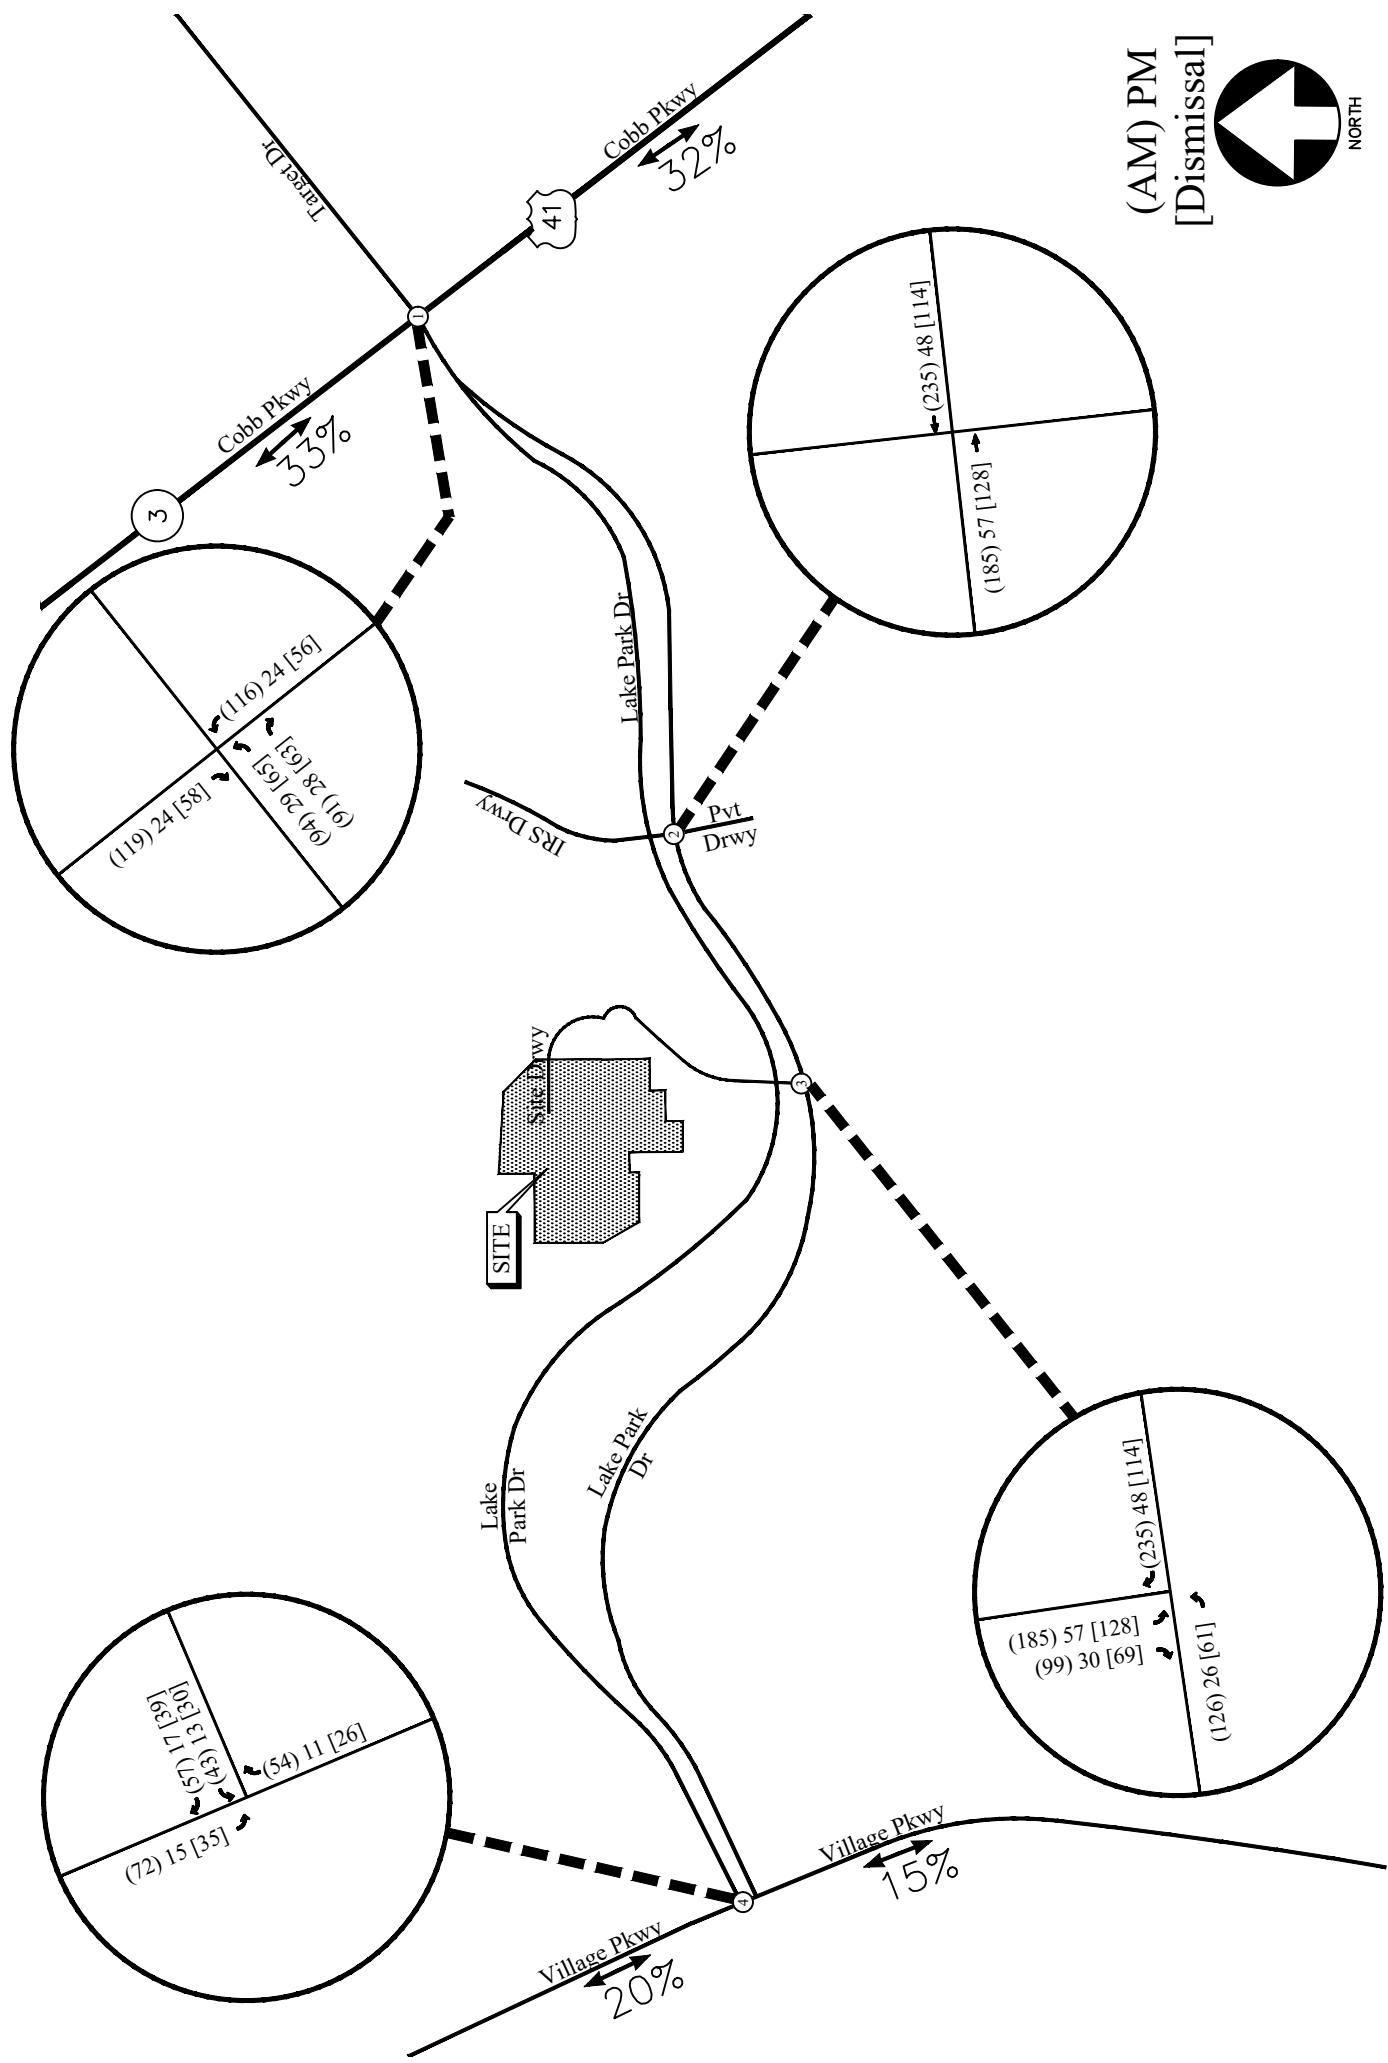

FIGURE 6
A&R Engineering Inc.

6.0 FUTURE TRAFFIC ANALYSIS

The future 2025 traffic operations are analyzed for the “Build” and “No-Build” conditions.

6.1 Future “No-Build” Conditions

The “No-Build” (or background) conditions provide an assessment of how traffic will operate in the study horizon year without the study site being developed as proposed, with projected increases in through traffic volumes due to normal annual growth. The Future “No-Build” volumes consist of the existing traffic volumes (Figure 2) plus increases for annual growth of traffic.

6.1.1 Annual Traffic Growth

To evaluate future traffic operations in this area, a projection of normal traffic growth was applied to the existing volumes. The Georgia Department of Transportation recorded average daily traffic volumes at several locations in the vicinity of the site. Reviewing the growth over the last three years has revealed a growth of approximately 1% in the area. This growth factor was applied to the existing traffic volumes between collector and arterial roadways to estimate the future year traffic volumes prior to the addition of site-generated traffic. The future “No-Build” peak hour volumes for the opening year 2025 and full build out year 2031 are shown in Figures 7 and 8 respectively.

6.2 Future “Build” Conditions

The “Build” or development conditions include the estimated background traffic from the “No-Build” conditions plus removed existing trips and the traffic from the proposed development.

6.2.1 Removed Existing Trips of Murata Electronics Inc

The Amana Academy Charter School will occupy the existing 35,600 sf building that is currently occupied by Murata Electronics company. The existing trips from this development are removed for the opening year 2025 and full build out year 2031 and are shown in Figures 9 and 10 respectively.

The new traffic volumes from the proposed site (Figure 5 and 6) and removed existing trips (Figure 9 and 10) were added to the base traffic volumes (Figure 7 and 8) to calculate the future traffic volumes after the construction of the new school for the opening year 2025 and full build out year 2031. These total future “Build” traffic volumes are shown in Figure 11 and 12.

						B (16.6) E (58.5) A (3.9) A (5.0)

* Police Officer modeled as actuated-uncoordinated traffic signal

The results of “No-Build” operations analysis indicate that all signalized intersections and the stop-controlled approaches at un-signalized intersection will operate at satisfactory levels-of-service “C” or better in all three peak hours.

The results of “Build” traffic (opening year 2025) operations analysis indicate that all the signalized study intersections and the stop-controlled approaches at un-signalized intersection will operate at satisfactory levels-of-service “C” or better in all three peak hours.

FUTURE TRAFFIC CONTROL AND LANE GEOMETRY (2025)

6.4 Future (Build-out year 2031) Traffic Operations

The future “No-Build” and “Build” traffic operations were analyzed using the volumes in Figure 8 and Figure 12, respectively. The results of the future traffic operations analysis are shown below in Table 7. Recommendations for future traffic control and lane geometry are shown in Figure 14.

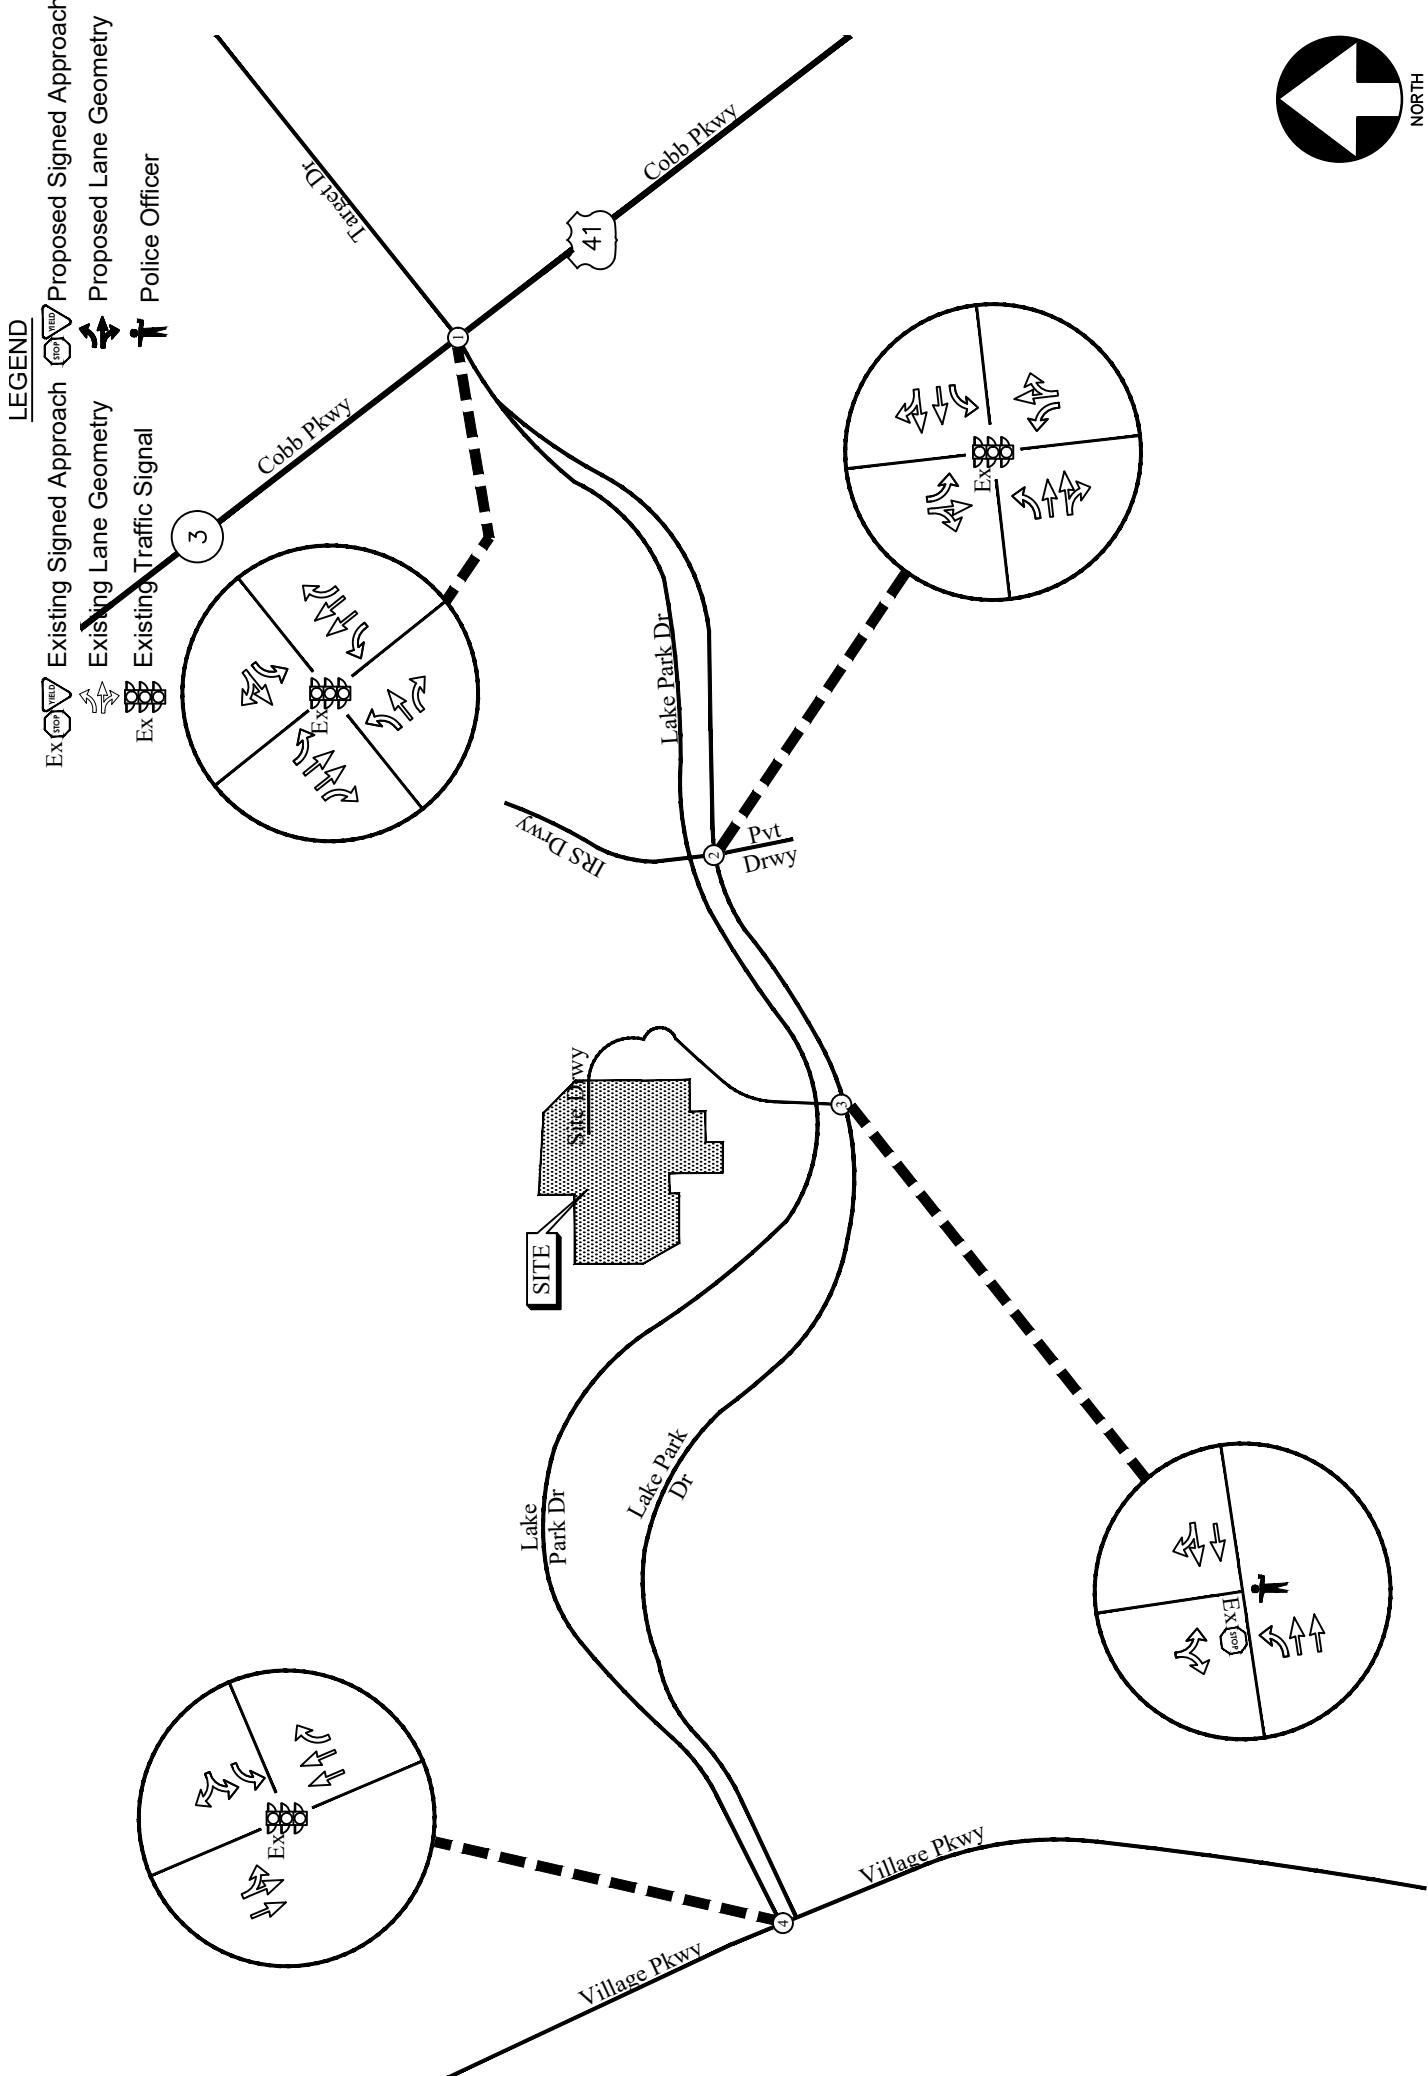

TABLE 7 – FUTURE (BUILD-OUT YEAR 2031) INTERSECTION OPERATIONS

Intersection		Future Conditions: LOS (Delay)					
		NO-BUILD			BUILD		
		AM Peak	PM Peak	Dismissal Peak	AM Peak	PM Peak	Dismissal Peak

	-Westbound Approach	-	-	-	C (22.6)	-	B (15.0)
	-Southbound Approach	C (15.0)	B (13.4)	B (11.4)	E (61.7)	C (24.8)	B (19.0)
4	<u>Lake Park Dr @ Village Pkwy</u>	A (7.0)	C (20.7)	B (15.9)	B (11.2)	C (21.1)	B (17.3)
	-Westbound Approach	E (68.8)	D (54.4)	E (58.8)	E (64.0)	D (54.7)	E (57.5)
	-Northbound Approach	A (1.6)	A (6.5)	A (3.7)	A (2.4)	A (6.7)	A (4.4)
	-Southbound Approach	A (4.7)	A (8.8)	A (4.8)	A (8.6)	A (9.3)	A (5.9)

* Police Officer modeled as actuated-uncoordinated traffic signal

The results of “No-Build 2031” operations analysis indicate that all signalized intersections and the stop-controlled approaches at un-signalized intersection will operate at satisfactory levels-of-service “C” or better in all three peak hours.

The results of “Build” traffic (build-out year 2031) operations analysis indicate that all the signalized study intersections will continue to operate at an overall level of service “D” or better during the AM, School Dismissal and PM peak hours.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Traffic impacts were evaluated for the proposed Amana Academy Charter School located at 2200 Lake Park Drive, Smyrna, in Cobb County, Georgia.

Phase 1 consists of only the kindergarten through 5th grade classrooms opening with 314 students in 2025. Phase 2 will represent full build-out in 2031. At full build-out, the kindergarten through 8th grade classrooms will have a total of 618 students.

The development proposes using the existing full access driveway on Lake Park Drive.

Existing and future operations after completion of the project were analyzed at the intersections of:

- Lake Park Drive at US 41/ SR 3 (Cobb Parkway)
- Lake Park Drive at Internal Revenue Service's Driveway
- Lake Park Drive at 2200 Lake Park Drive Site Driveway (Murata Electronics / School Driveway)
- Lake Park Drive at Village Parkway

The results of “No-Build 2025 & 2031” operations analysis indicate that all signalized intersections and the stop-controlled approaches at un-signalized intersection will operate at satisfactory levels-of-service “C” or better in all three peak hours.

The results of “Build” traffic (opening year 2025) operations analysis indicate that all the signalized study intersections and the stop-controlled approaches at un-signalized intersection will operate at satisfactory levels-of-service “C” or better in all three peak hours.

The results of “Build” traffic (build-out year 2031) operations analysis indicate that all the signalized study intersections will continue to operate at an overall level of service “D” or better during the AM, School Dismissal and PM peak hours. The southbound school driveway approach will operate at level-of-service “F” in the AM peak hour.

7.1 Recommendation for Site Access Configuration

The following configuration is recommended for the site driveway intersections.

- Site Driveway 1: Existing full access driveway on Lake Park Drive
 - Two entering lanes and one exiting lane
 - Police Officer will control the traffic during AM and School Dismissal peak hours and Stop-sign control during rest of the day.
 - Provide required sight distance by removing the existing vegetation.

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 125

Control Type: Actuated-Coordinated

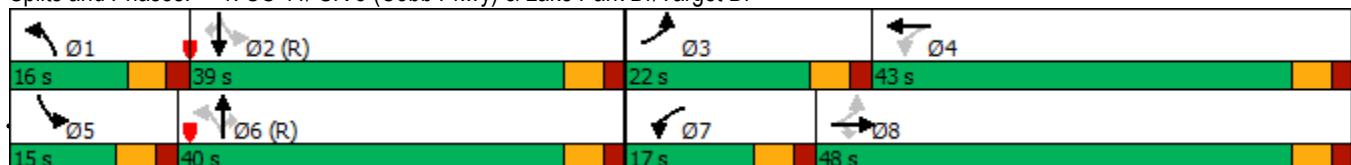

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: US 41/ SR 3 (Cobb Pkwy) & Lake Park Dr/Target Dr

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBT, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: US 41/ SR 3 (Cobb Pkwy) & Lake Park Dr/Target Dr

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 125

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: US 41/ SR 3 (Cobb Pkwy) & Lake Park Dr/Target Dr

HCM 6th Signalized Intersection Summary
1: US 41/ SR 3 (Cobb Pkwy) & Lake Park Dr/Target Dr

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: US 41/ SR 3 (Cobb Pkwy) & Lake Park Dr/Target Dr

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 125

Control Type: Actuated-Coordinated

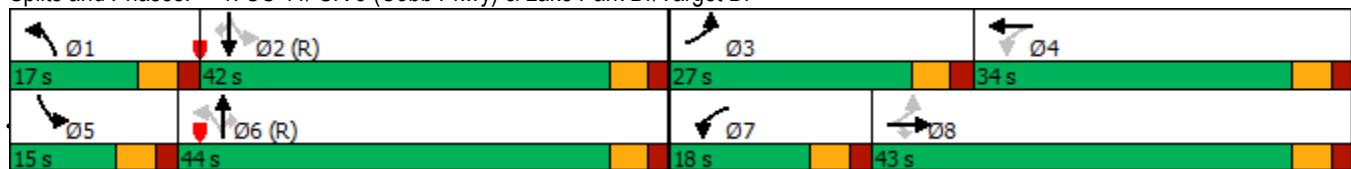

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: US 41/ SR 3 (Cobb Pkwy) & Lake Park Dr/Target Dr
